

GREENYELLOW AND ORANGE JOIN FORCES TO SOLARIZE THEIR DATA CENTER IN POLAND

- GreenYellow, a leader in decentralized energy transition in France and internationally, and Orange Polska, the Polish telecommunications giant, have signed an agreement to solarize the Warsaw Data Hub, one of the largest data centers in Poland.
- This 20-year contract is based on the innovative PVaaS (Photovoltaic-as-a-Service) model. GreenYellow will handle the financing, construction, maintenance, and operation of the rooftop solar power plant, enabling Orange Polska to benefit from local, competitive green energy that is 100% self-consumed on-site without any initial investment.

The main Concrete and Sustainable Benefits

The **299 kWp photovoltaic plant**, installed on the **roof of the Warsaw Data Hub** in Lesznowola, will annually produce 250 MWh of green energy, totaling **5,000 MWh over the contract period**. This energy will be entirely self-consumed by the site, thus avoiding injection into the local grid and reducing distribution costs for Orange Polska. The project will also **prevent the emission of 3,200 tons of CO₂ over the entire period**, marking significant progress in reducing the company's carbon footprint.

An Innovative Partnership Model

Thanks to the **PVaaS model**, **GreenYellow covers the investment costs**, offering Orange Polska an efficient decarbonization solution without straining its credit capacity. GreenYellow Polska's teams will provide a turnkey service, from energy solutions analysis to full system management, including investment planning and installation.

"We are delighted to work with one of the world's largest telecommunications companies. We closely follow the challenges faced by this sector and respond with our decarbonization platform offers. The scope of the agreement is tailored to Orange Polska's individual needs and addresses the client's real issues. The long-term benefits we guarantee the client - both financial and environmental - are integral to the agreement," says **Anna Dobrowolska, Sales Director at GreenYellow Polska**.

GreenYellow continues its mission as a committed accelerator to the energy transition, supporting a highly energy-consuming sector in its decarbonization actions. Moreover, this project fully aligns with GreenYellow's development strategy in Europe, launched in 2022.

ABOUT GREENYELLOW

GreenYellow, a French company founded in 2007, has become a major player in the energy transition in France and abroad and a true partner of companies and communities.

As an expert in decentralized PV production, energy efficiency projects and energy and electric mobility services, GreenYellow supports its clients throughout the value chain. The company is responsible for the development, funding, and operation of infrastructure projects, enabling them to produce local and competitive green power, reduce their energy consumption and fast-track their decarbonization.

The set of projects carried out within GreenYellow in 2023 have enabled our clients to avoid the emission of 427,000 tonnes of CO₂ equivalent. The group also aims to achieve the "Net Zero" carbon neutrality goal for categories 1 and 2 by 2040.

Operating in nearly 20 countries on 4 continents, GreenYellow is constantly innovating to meet today's climate challenges and expand its platform with unique and global offers.
