

TOTALNET Uruguay, a company owned by Nuek, a Minsait Business, and a leading payment processing services provider, today announced the successful completion of a major IT modernization program carried out as part of its long-term technology evolution, in collaboration with **European Business Solutions (EBS)**.

The initiative included the migration of its COBOL-based OpenVMS legacy on-premises environment towards a modern multi-cloud environment, marking a critical step towards enhanced service delivery and operational agility, fully aligned with TOTALNET's strategic roadmap to adopt next-generation software and platform capabilities within the **Nuek technology ecosystem**.

The modernization program has been strategically designed in phases. The first phase, completed in 2022, focused on the offloading and migration of TOTALNET's core business applications to Oracle Cloud Infrastructure (OCI) and Microsoft Azure. This milestone has been successfully achieved in a record time of just ten months through close collaboration between **TOTALNET** and **EBS** teams.

In 2024, an additional phase addressed a major database version upgrade required for regulatory and compliance purposes. Most recently, the final phase introduced significant improvements in platform performance, stability, and long-term maintainability, further preparing **TOTALNET**'s technology stack for future software-driven innovation.

This modernization journey represents a foundational step in **TOTALNET**'s broader transformation towards a modern, scalable, and software-centric payments platform, consistent with the technological vision and standards promoted by Nuek.

TOTALNET selected European Business Solutions as a key partner to lead the transformation based on its strong track record in complex legacy modernization projects and proven expertise in cloud migrations.

Alberto Mello, CEO of TOTALNET Uruguay, commented: *"This transformation is a key milestone in TOTALNET's technology journey. In addition to improve the quality of our services and expand our payment solutions for customers, this transformation strengthens the foundations of our platform and positions us to accelerate innovation, fully aligned with Nuek's vision of next-generation payment software and platforms."*

Jean-Yves Lorre, CEO of European Business Solutions, highlighted the collaborative success: *"Our 25 years of modernization experience, combined with our industrialized tools and proven methodologies, were key to ensuring a smooth and efficient transition. We are proud to support TOTALNET in this strategic journey and look forward to continuing with the next phase of innovation."*

The successful completion of this modernization initiative lays a strong foundation for TOTALNET's continued evolution, enabling greater scalability, resilience, and innovation in Uruguay's fast-growing digital payments sector.
